
Voltatex® 4020 1-component resin

Voltatex® 4020 is a styrene based, thermosetting, ready-to-use, blue-grey pigmented one pack ready-to-use impregnating resin with high capillary activity, based on unsaturated polyesterimide resins.

Attributes

- single component
- coverage of rust
- improved protection against climate influences
- high efficiency due to favourable curing conditions
- excellent impregnating result at low material consumption

The cured resin compound is characterized by:

- good resistance against solvent gases
- thermal long term stress

Application

Suitable for:

- Insulation systems of thermal class 200 (N)

Impregnating of:

- transformers
- stabilisers

Standards

- UL-File-Nr.: E 101752 (M) Underwriters Laboratories Inc., USA
- Isolation-system temperature of thermal class 200 (N) acc. to IEC 60085:2007
- Temperature index in acc. with IEC 60455-3-5, Type 200
- Testing Method in acc. with IEC 60216
- Temperature class acc. to UL 1446:

Twisted Pair ASTM D2307 MW 30:200

MW 35:200

Helical Coil ASTM D2519 MW 35:200

Insulation-system acc. to UL 1446 (IEC 61858):

Class 130 C190HE

R150HE

The information on this data sheet is based on the information provided by our supplier. It does not represent any specification or agreements regarding conditions or properties. The indicated values are standard values. Deviations from those values due to production and application cannot be excluded. The information on this data sheet is addressed to experts who use it at their own discretion and at their own risk. We do not guarantee results, or accept liability for the indicated specifications or for results obtained based on the specifications. Please contact us for more detailed information. Non-toxic and toxic substances are listed on the safety data sheet.

Delivery forms

Voltatex® 4020 is delivered in 20 kg one-way-cans.

Storage

The resin can be stored for up to 4 months at max. 25 °C if sealed correctly in original containers. Opened containers have to be resealed and protected against direct daylight!

Hardening

In order to minimize evaporation of reactive components while curing the impregnated objects should be heated up to the curing temperature in the shortest possible time. The air flow in curing oven should be kept to the minimum permitted by safety considerations.

Curing times: at 150 °C: 2-3 h

Protection

Voltatex® 4020 is biologically inactive and safe to health. Implement normal protective measures when processing the liquid dip resin: See the Material safety data sheet (MSDS).

Processing

The impregnating Resin can be applied by using:

- all kind of conventional dip & bake equipment
- continuous and vacuum dip processes
- VPI process

Unlimited tank stability can be achieved as long as Voltatex® 4020 is kept below 25 °C and at least 10 % of the tank content is used and replaced with fresh resin per month. Cooling of the resin is needed provided the ambient temperature is exceeding the recommended maximum temperature. In order to avoid sedimentation of pigments Voltatex® 4020 need to be stirred up in the delivered packaging prior to filling into the tank. Additionally, to keep the material homogeneously while processing, a continuous or repetitive stirring schedule has to be set up. It is highly recommended to install a motor-powered stirring unit in the storage tank. For optimum process viscosity it is possible

to add Voltatex® T031.

Cleaning

Once cured Voltatex® 4020 is almost insoluble. Therefore, application equipment should be cleaned regularly with cleaner

Voltatex® T050. All equipment cleaning and maintenance should be carried out in accordance with the equipment manufacturer's instructions.
